

Recon-ng Cheat Sheet

by Simran Malakar

Workspace Commands

<code>workspaces create <name></code>	Create a new workspace
<code>workspaces list</code>	List all workspaces
<code>workspaces load <name></code>	Load a workspace
<code>workspaces remove <name></code>	Remove a workspace

Marketplace Commands

<code>marketplace info <module></code>	Get info about a module
<code>marketplace install <module></code>	Install a module
<code>marketplace remove <module></code>	Remove a module
<code>marketplace search <term></code>	Search marketplace for a module

Module Commands

<code>modules load <path></code>	Load a module
<code>info</code>	Display module information
<code>options</code>	Show module options
<code>options set <KEY> <VALUE></code>	Set input option for the module
<code>run</code>	Execute the module

View Data Commands

<code>show hosts</code>	Display discovered hosts
<code>show domains</code>	Display discovered domains
<code>show contacts</code>	Show email/person contact data
<code>show credentials</code>	Show found credentials

Recon-ng Cheat Sheet

by Simran Malakar

Tips and Workflow

1. Start Recon-ng:

- `recon-ng`

2. Create and Load Workspace

- `workspaces create test_project`
- `workspaces load test_project`

3. Install Required Modules

- `marketplace search whois`
- `marketplace install recon/domains-contacts/whois_pocs`
- `marketplace install recon/domains-hosts/google_site_web`
- `marketplace install recon/hosts-hosts/resolve`

4. Load a Module

- `modules load recon/domains-contacts/whois_pocs`

5. View Module Info and Options

- `info`
- `options`

6. Set Required Options

- `options set SOURCE example.com`

7. Run the Module

- `run`

8. View Collected Data

- `show hosts`
- `show domains`
- `show contacts`

9. Continue Enumeration with More Modules

- `modules load recon/domains-hosts/google_site_web`
- `options set DOMAIN example.com`
- `run`

10. Export or Save Logs (Optional)

- `spool start output.txt`
- `show hosts`
